PROJECTS

Novels.se – *A online library*

- An online library where users can create accounts to write books that all users can read, comment on, and review. As a reader, you can also save books to your library, customize how it looks to read, view the most popular books, or search for them.
- Made in React,Express, CSS and MySQL.
- **Exists Online!** Novels.se

Frisör saxe – A website for a barbershop

- A website for a barbershop that generates various languages based on a template and has automated tests in Selenium.
- Made in Javascript,HTML,CSS and Python.

Admin Attendance- *Registering attendance for teachers at NTI Gymnasiet.*

- A website where everyone at the school can see if the teachers are present. Each teacher has a box with a Raspberry Pi Pico connected to two buttons, where they can inform the system whether they are present or not. The Raspberry Pi Pico sends information to the server, which updates the website with the teacher's status.
- Made in Next.js,Tailwind and MongoDB, while the boxes are made in MicroPython and the is made in Node.js.
